

Durability of Surface Printing/ Tipping Fixture

BQ Technologies' durability of surface printing/tipping fixture is designed to be a secure hold down of the card under test. The fixture holds a standard ID-1 size card in a cavity that securely holds the card in place when removing test tape.

The fixture is manufactured of a durable aircraft grade aluminum with a hard-anodized coating for durability.

It has splayed feet and aggressive non-slip rubber feet for stability.

The fixture is designed to perform the following tests (tape not included):

- MasterCard CQM
- Durability of Surface Printing
- Durability of Tipping

Change to "Mastercard" for consistency with other brochures, (BQ usually says "Mastercard" even though "MasterCard" is how the credit card company spells it)
