

# Magnetic Developer

Q-View II magnetic developer allows you to visually examine magnetic encoding on magstripes with the naked eye and make photomicrographs. It can help you identify alignment problems, see damage, and perform quality inspection on your magnetic stripe cards and card readers.

Our developer is a combination of tiny magnetic particles suspended in a clear solvent liquid carrier. When applied to the card, the particles attract to the magnetically charged parts of the stripe and the liquid evaporates.

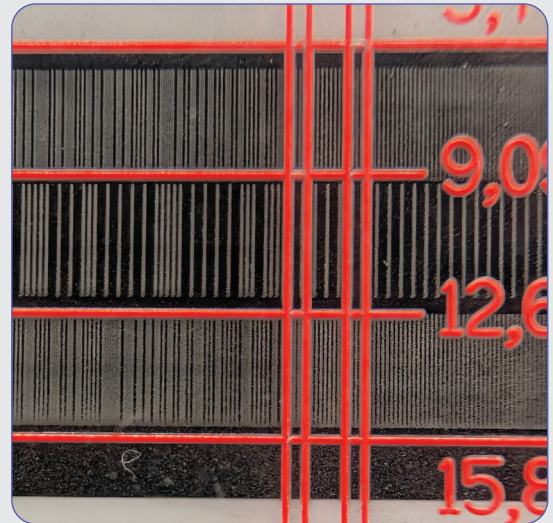

Q-View II Magnetic Developer allows you to examine magnetic encoding on magstripes and make photomicrographs.

A fully developed card is shown in BQ Technologies' Magnetic Stripe Location Gauge, which enables you to verify encoded track locations.

# Ordering Details

| Part # | Description                 |
|--------|-----------------------------|
| 907200 | Dropper-style, 4 US fl. oz. |

## Specifications

*Magnified view of encoded tracks.*

### 907200 Dropper Style Magnetic Developer

- Easy to use dropper style provides precise application of developer.
- Includes glass dropper, laboratory grade glass bottle.
- 4 US fluid ounces
- REACH Compliant

301 Reagan Street  
Sunbury, PA 17801 USA
